

BLADDER ASSESSMENT KIT

Designed with Primary Care in Mind

For your patients experiencing:

- BPH
- Bladder Outlet Obstruction
- Acute Urinary Retention
- Overactive Bladder
- Urinary Incontinence
- Diabetic/Neurogenic Bladder
- MS/Parkinson's

What the Kit does:

The BladderScan® Bladder Assessment Kit is a comprehensive program to bring Urology into your practice. The instruments in the kit enable rapid and noninvasive measurement of post-void residual (PVR) and urinary flow, allowing you to:

- Assess patient symptoms
- Detect high PVR or abnormalities in flow
- Monitor progress of therapy for continued treatment or referral

Benefits for you, your patients and your practice:

The BladderScan® Bladder Assessment Kit provides immediate and accurate information to diagnose bladder function. Tests can be conducted easily and quickly by your office staff, so you can discuss potential treatment options with your patients at the time of their office visit. Your patients can avoid time-consuming referrals, pain from catheterization and the related risk of infection.

Kit Contents:

Instruments	Educational Tools

BladderScan® BVI 9400

About BladderScan® Instruments

BladderScan® portable 3-D ultrasound instruments are the gold standard in bladder volume measurement. They quickly and accurately measure bladder volume and post-void residual (PVR) and are easy for staff to learn and use. Choose one of three different BladderScan® models detailed below:

The BladderScan® BVI 9400, featuring patent-pending NeuralHarmonics™ technology, offers accelerated speed and sharpened accuracy in bladder volume measurement. The device features a large color screen that assists aiming, a voice annotation feature, an onboard printer, onboard video tutorials, and ScanPoint® online imaging and calibration services.

The BladderScan® BVI 6400, a hand-held instrument, stores 10 or more patient exams, lets you record patient data with a voice annotation feature, and works with ScanPoint® online imaging and calibration services.

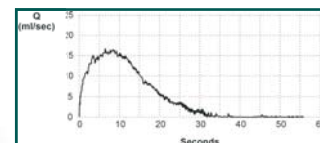

The BladderScan® BVI 3000 is a table-top ultrasound instrument that measures bladder volume and post-void residual (PVR). The BVI 3000 features an integrated printer.

About FloPoint® Elite

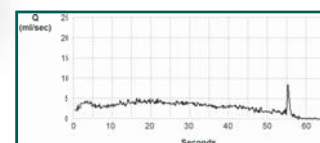

The FloPoint® Elite Uroflow System records and charts a patient's pattern of urinary flow, helping you quickly assess the mechanics of flow, and diagnose abnormalities in voiding patterns. FloPoint® Elite is convenient and easy to use. It sets up in a standard toilet, putting patients at ease and minimizing staff clean up.
