RE: BladderScan Diagnostic Ultrasound

Dear Nate:

It has indeed been my pleasure to have been able to use the BladderScan in my urologic practice for the last several years. Prior to this time, it was very complicated to be able to determine post-void urinary residuals. We had patients that would require instrumentations that I wished could have been managed by some other method. I did have a transrectal ultrasound machine that had a renal and testicular access probe. This machine was capable of determining post-void urinary residual but was very cumbersome to use. Your BladderScan is very easy for my nursing staff to use. I am extremely pleased to have been able to use this machine and I look forward to further advancements in the future.

If there are any questions concerning this matter, please do not hesitate to call.

Sincerely,

Joseph S. Dankoff, M.D.
